Diabetes: Low Risk Foot Keeping Your Feet Healthy

Department of Podiatry
Community & Therapy Services

This leaflet has been designed to give you important information about your condition / procedure, and to answer some common queries you may have.

Information for parents and carers

Introduction

Diabetes is a lifelong condition that can cause serious foot problems. These usually occur because of damage to nerves (affecting the sensation) and blood vessels (circulation).

These changes can be very gradual and you may not notice them. This is why it is very important you have your feet screened every year. This is usually done by your GP surgery.

Your foot screening has shown that you do not have nerve or blood vessel damage at present and so you are currently at low risk of developing foot complications because of your diabetes.

Controlling your diabetes, cholesterol and blood pressure, and having your feet screened every year by a professional trained to do so, will help to reduce the risk of developing problems with your feet.

Please note that smoking further impairs the circulation and smokers are strongly advised to stop.

As your feet are in good condition, you may not need regular podiatry treatment. If you follow the simple advice in this leaflet, you should be able to carry out your own foot care unless you develop a specific problem, or unless you have been advised against doing so.

Advice to Keep Your Feet Healthy

Check your feet every day

You should check your feet every day, preferably at the end of the day, using a mirror if necessary, or ask a partner or friend to help.

Look for:

- Any blisters, swelling or red areas. Do not burst blisters. Try to identify the cause of the redness e.g. rubbing from footwear
- Any soggy skin. This can provide an entry for infection
- Any discharge from under the nails
- Any pain or numbness
- Any hard skin or corns, especially with dark discoloration or redness, or cracks around the heels. Do not use over the counter corn remedies. They are not recommended for anyone with diabetes as they can cause damage to the skin and create more problems

If any of the above are present seek medical advice as soon as possible. If there is any change in colour do this URGENTLY.

Any minor cut or blister should be covered with a clean dressing until healed. If after 2-3 days there is no sign of healing or you notice any of the signs mentioned above seek medical advice.

Information for parents and carers

Early detection and treatment of any problems improves the chances of a good outcome. Every break in the skin is potentially serious and with diabetes infection can spread with alarming rapidity.

Wash Your Feet Every Day

You should wash your feet every day in warm water and with a mild soap. Rinse them thoroughly and dry them carefully with a soft towel, especially between the toes.

Do not soak your feet for longer than 5 minutes as this can damage the skin.

Do not use talcum powder as this can leave a residue which when wet could irritate and cause the tissue to break down.

Moisturise Your Skin

If your skin is dry apply a moisturising cream every day, unless advised otherwise. Avoid the areas between the toes as this may become too moist leading to the risk of the skin breaking down and infections.

Toe Nails

Cut or file your toe nails regularly, following the curve of the end of your toe. Use a nail file to make sure there are no sharp edges which could cut into the next toe.

Clippers and an emery file are the best tools to use.

Do not cut down the sides of your nails as you may create a 'spike' of nail which could result in an ingrown toe nail.

Socks, Stockings and Tights

You should change your socks, stockings or tights every day. They should not have bulky seams and the tops should not be elasticated. Cotton or wool socks are best, as natural fibres help to keep the feet dry by absorbing the moisture.

Check Your Shoes

Check the bottom of your shoes before putting them on to make sure that nothing sharp such as a pin, nail or glass has pierced the outer sole.

Also, run your hand inside each shoe to check that no small objects such as small stones have fallen in, or the lining is rough or split.

Avoid Walking Barefoot

If you walk barefoot you risk injuring your feet by stubbing your toes and standing on sharp objects which can damage the skin, this advice applies even when walking around in the house.

Information for parents and carers

Badly Fitting Shoes

Badly fitting shoes are the most common cause of irritation or damage to the feet. The professional who screened your feet may give you advice about the shoes you are wearing and about buying new shoes.

Over-the-Counter Corn Remedies

Never use over-the-counter corn remedies. They are not recommended for anyone with diabetes as they damage the skin and create ulcers.

Foot Spas

The general advice is that these are not suitable for use by diabetics.

Holiday Footcare

Before you travel

Check that your holiday insurance covers diabetes.

Arrange a wheelchair if you have foot problems, especially if you are flying.

Pack a small first aid kit containing plasters, sterile dressings, bandage, tape and antiseptic cream.

Allow plenty of time for your journey.

The journey

Wear hosiery and shoes with adjustable fastening to accommodate swelling.

If in a car or coach take frequent opportunities to stretch your legs.

Flying

Allow plenty of time at the airport.

Don't carry heavy luggage. Use a trolley.

Ask for an aisle seat. Walk up and down every half an hour to prevent swelling.

Do not get dehydrated. Keep sipping water.

Beware of trolleys pushed by other passengers in a hurry.

On arrival

Hot sand and sharp rocks or broken glass can cause serious injuries. Wear plastic sandals on the beach and in the sea.

Use a sun block or very high factor sunscreen or keep in the shade. Take extra care of the legs and top of the feet.

Apply cream to dry skin avoiding the area between the toes.

Information for parents and carers

First Aid

Clean and cover all injuries, however slight.

Check injuries daily. Seek help if they get worse.

Holiday footwear

Never wear new shoes on holiday. They may cause rubbing.

If you have hospital shoes, continue to wear them on holiday.

Wear hosiery to prevent blisters.

Individual Advice

Who can I contact if I have concerns about my diabetes or my foot care?

Contact your podiatrist immediately if any of the above signs are present for an urgent appointment.

Podiatry Clinic, Diabetes Centre

Tel 03033 303105 – Grimsby

Tel 03033 306522 – Scunthorpe

Wheelchair Services

Tel 03033 304730

If an urgent problem occurs on a weekend or Bank Holiday please attend the Accident and Emergency Department at your nearest hospital.

Visiting Times

The Podiatry Department is open 8:30am-5pm Monday to Friday.

Patient Advice and Liaison Service (PALS)

The Patient Advice and Liaison Service offers confidential advice, support and information on any health related matters.

If you have a comment, concern, complaint or compliment about the care or service you have received from the Trust you can contact the PALS team as follows:

Telephone: 03033 306518

Email: nlg-tr.PALS@nhs.net

There are also offices at both the Diana Princess of Wales Hospital (near the main entrance) and Scunthorpe General Hospital (on the C Floor, near the outpatient department), should you wish to visit.

Please note: PALS should not be contacted for clinical advice relating to the content of this leaflet. The service should be contacted directly in the first instance.

Information for parents and carers

Confidentiality and How We Use Data

Personal information on NHS patients is collected and recorded within paper and electronic formats primarily to support high quality care that is safe and effective. To do this, information is also used to support quality improvement activities, investigate any concerns you may raise as well as to support and understand NHS performance. All NHS staff have a legal duty to keep information about you confidential.

Information will only ever be shared with people who have a genuine need for it. Other circumstances where information may be shared include administrative teams to plan future care needed, commissioners of Trust services, other NHS or social care providers and in some cases voluntary sector providers.

Zero Tolerance - Violent, Threatening and Abusive Behaviour

The Trust and its staff are committed to providing high quality care to patients within the department. However, we wish to advise all patients / visitors that the following inappropriate behaviour will not be tolerated:

- Swearing
- Threatening / abusive behaviour
- Verbal / physical abuse

The Trust reserves the right to withdraw from treating patients who are threatening / abusive / violent and ensuring the removal of those persons from the premises.

All acts of criminal violence and aggression will be notified to the Police immediately.

Risk Management Strategy

The Trust welcomes comments and suggestions from patients and visitors that could help to reduce risk.

Perhaps you have experienced something whilst in hospital, whilst attending as an outpatient or as a visitor and you felt at risk.

Please tell a member of staff on the ward or in the department you are attending / visiting.

Moving & Handling

The Trust operates a Minimal Lifting Policy, which in essence means patients are only ever lifted by nursing staff in an emergency situation.

Patients are always encouraged to help themselves as much as possible when mobilising, and if unable to do so, equipment may be used to assist in their safe transfer.

If you have any questions regarding moving and handling of patients within the Trust, please speak to a member of staff in the ward or department you are visiting.
